RENEWABLE ENERGY

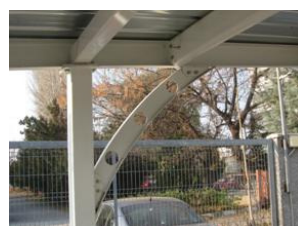

Outdoor LED Spotlight
New Product Launch

- Using grid electricity for lighting an outdoor feature is often difficult and always expensive in places where the grid is not readily available.
- Installing a solar LED set allows lighting at night, is often cheaper to install and has no running costs.
- The battery allows an autonomy of ~3 days, which makes it viable even in winter.
- The solar PV panel is generally pole mounted; all other DC components protected in an IP65 casing.

POWER	10W
power supply	24V DC
Flux of Spot light min.	1000lm
Flux per Watt	100-120lm/W
power of LED	10 x 1W
angle of light	adjustable
light colour	cold white (6500K) or warm white (3000K)
power coefficient	> 90%
working temperature	-30 to +40 °C
LED life	> 50000 hours
body material / colour	Aluminium / grey
outdoor cabinet	IP65
dimensions (l x w x h)	115mm x 86mm x 86mm
weight	0.6 kg

Our carports and other PV systems are custom designed.
