

EV SOL Solar Outdoor Advertising Sign & Light

The high power 'LED' lights are powered by solar energy.
They automatically switch on at sunset and illuminate the sign for the night.

Specifications:

- Aluminum construction according to drawing
 - Tempered glass cover
- Mono crystalline photovoltaic module CPV12M 48W
 - 12 V - 24 Ah solar maintenance-free battery
- DC cabinet IP 65 to protect battery and charge controller
 - Steca charge controller with dusk sensor
 - Battery autonomy: ~5-6 days

The EV SOL Solar Outdoor Advertising Sign Light uses a high performance solar panel to generate energy during daylight hours which provides power to a sealed solar battery. From the battery / controller a cable leads to the LED light (containing high power, white LEDs). The light operating time is controlled by a digital timer.
This very effective system comes ready to operate, supplied with all necessary components.
All that is needed is your own advertising sign (150 x 100 cm) to be placed under the protective glass cover.

Other photovoltaic lights can be custom designed. Please contact us with your requirements.
